AMENDMENTS TO THE CLAIMS:

This listing of claims will replace all prior versions, and listings, of claims in the application:

1 - 48. (Cancelled)

49. (Currently Amended) An integrated circuit comprising:

a <u>premetal</u> dielectric layer disposed between a substrate and a first metal layer;

a trench defined by a recess in the <u>premetal</u> dielectric layer, the trench not extending below a top surface of the substrate;

a first contact pillar extending substantially from the a top surface of the substrate to a bottom surface of the first metal layer within the trench; and

a capacitor formed in the trench overlying the first contact pillar such that the capacitor is formed at least in part on a side of the first contact pillar, and the first contact pillar is a <u>first</u> plate of the capacitor.

50. (Original) The integrated circuit of claim 49, further comprising a second contact pillar extending substantially from the top surface of the substrate to a bottom surface of another portion of the first metal layer, wherein the second contact pillar is substantially the same height as the first contact pillar.

2 of 6 TI-32205.1

- 51. (Original) The integrated circuit of claim 49, wherein the capacitor comprises a storage element of a memory cell.
- 52. (Original) The integrated circuit of claim 51, wherein a storage node of the storage element comprises the first contact pillar.
- 53. (Original) The integrated circuit of claim 52, wherein the storage node further comprises a conducting layer lining the trench and the side of the first contact pillar.
- 54. (New) The integrated circuit of claim 50, wherein the second contact pillar is a bit line contact pillar.
- 55. (New) The integrated circuit of claim 49, wherein the capacitor has a capacitor dielectric layer that is comprised of a different material than the premetal dielectric layer.
- 56. (New) The integrated circuit of claim 49, wherein the capacitor has a second plate that is comprised of a different material than the first metal layer.
